

How does revenue growth of all the GICS sectors compare over 2013, 2014, 2015, 2016 calendar years?

ANNUAL GROWTH RATES FOR ALL GICS SECTORS REVENUES
2013-2016

Here is the line chart for the annual growth rates of all the GICS sectors compared year over year (including 2013, 2014, 2015, 2016 calendar years).

The distribution is right-skewed or positively skewed. That means, the mean is greater than the median.

The maximum of growth of 1808% was experienced only at the beginning of 2013 calendar year. From that point it declined dramatically with the median of 33% between 2014 and 2015 calendar years. It reached its minimum point of -612%, which means that 50% of GICS sectors experienced a major revenue decline.

The standard deviation of revenue growth is 1041%, which is considered as really high. It means that the data is spread out, that is not unusual as the range is 2420% with revenue growth across all the calendar years.
